Take Control...

cost, inventory, security, usage, accountability

SupplyLOCKER can provide...

- 24/7 availability of items
- Accountability
- Control of large and bulky items
- Standalone option
- Rapid access

The SupplyLOCKER is a versatile unit that offers a variety of location sizes to accommodate large or bulky items. The unit can be implemented as part of an existing system, or as a standalone solution controlled by our leading inventory management software.

STANDLONE OR ADD-ON

Can be used as a standalone solution or included as part of a larger SupplyPoint™ installation.

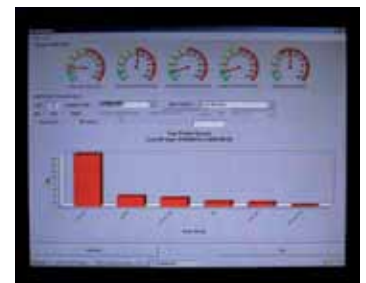

LOCKER OPTIONS

3 different size locker doors are available, allowing the control of a range of large or bulky items. All items are easily located by a 'pick to light process' for quick and intuitive access.

COMPATIBILITY

In keeping with our full product range, SupplyLOCKER provides seamless integration with other SupplyPoint™ products.

ACCOUNTABILITY

The unique SPS software provides a complete audit trail on who, when, where and why about the usage on any component within the system.

Simple solutions, technically advanced

**Combined with our powerful SPS inventory management software
the SupplyLOCKER compliments our extensive product range to efficiently
control an even greater range of your essential inventory**

EXPANDABLE AND VERSATILE

SupplyLOCKER can be specified with a mixture of different size lockers to provide between 9 and 27 secure locations in a single frame. Up to 10 frames can be connected providing up to 270 secure locations in a single system.

MANUAL OVERRIDE

In an ideal world a manual override would never be needed. But if required, SupplyLOCKER ensures 24/7 availability to all the contents with a quick and easy manual override capability which allows access to items stored within.

LOCKER OPTIONS

SupplyLOCKER has three standard door sizes which can be mixed within one frame to optimise capacity. If required SupplyLOCKER can be configured with windows and backlights for instant visual content inspection.

EFFICIENCY

Multiple locations can be selected in one transaction minimising the time required to withdraw several items.

COMPATIBILITY

The SupplyLOCKER is fully compatible with all existing SupplyPoint™ machines.

SECURITY

Access to the contents in the SupplyLOCKER is restricted by the use of: user name, password, biometric identification, card readers or a combination of these options. The door locks are of a high strength and cannot be forced open in normal or aggressive use without the assistance of tools. The items held within the SupplyLOCKER are hidden from view and can be randomly distributed around the machine, reducing the risk of the unauthorised removal of contents.

TRACEABILITY

The powerful SPS software provides a complete audit trail allowing management to know who, what, where and why about the usage of items managed by the system.
